

IEEE - CONFERENCE PUBLICATIONS (Invited, Oral and Posters)

Full-length original research papers presented at the 10th International Workshop on Processing and Applications of Superconducting (RE)BCO Large Grain Materials will be considered for publication in *IEEE Transactions on Applied Superconductivity*. All papers submitted will be refereed according to the usual review procedure of IEEE.

Submission deadline is **Monday, January 15, 2018**

Manuscript Submission for PASREG Contributions

Submission of a manuscript indicates an agreement to comply with IEEE policies for publication. [IEEE Publishing Policy and Ethics](#)
[Authors Rights and Responsibilities](#)

The manuscript subject matter should correspond to the conference presentation.

Authors should not take liberty to expand the manuscript to other topic areas. Approval of the Editor assigned to the PASREG Contributions is required for consideration of manuscripts with authors, title or subject that is different from the information appearing under the presentation ID in the official program.

The presentation should be given at the appointed day and time by the author or a co-author.

A manuscript that corresponds to a presentation ID recorded as not being given or shown will not be approved for publication. Approval of the Editor will be required for consideration of manuscripts moved to another day and time than appearing in the official program.

Manuscript page limit.

Authors may use the standard IEEE template on the Author Center, <http://ieeauthorcenter.ieee.org/>. Authors do NOT need to use the 4-page template typically required for conferences such as ASC or MT. Manuscript length should be sensible to convey the material presented. While lengthy review papers will not be allowed, we think good to allow authors a liberty to extend the paper over 4 pages and develop a full article.

Manuscript submission.

Authors should be very careful to explicitly state "this is a submission to the PASREG 2017 collection" in the submission cover letter, the authors should also select <Special Issue-Invited Paper> for Manuscript Type during the submission process, even if the manuscript isn't officially invited.

Manuscript support.

Manuscripts will receive support from IEEE Publications for typesetting final versions.

Some key facts you really need to know, please read!

- A paper may be deemed unsuitable if it (a) does not present a clear scientific discussion or contains minimal new scientific material; (b) contains minimal references; (c) is written in poor English language; or (d) has major style errors, although style errors should not occur if the paper template is used.
- To avoid delays or even the rejection of your manuscript for reasons related to English language take advantage of the paper writing service (<http://www.prof-editing.com/ieee/index.php>) – for about \$8.00 per 250-word page.
- Articles will be automatically checked for plagiarism (including self-plagiarism) using electronic databases, including other submissions to the same conference. Severe cases of plagiarism will result in rejection of a manuscript, and may trigger other punitive actions by IEEE. The most common mistake by authors is cutting and pasting from previous versions of manuscripts describing earlier stages of the same work.

Contact Information

For any publication related question, please contact PASREG 2017 Conference Organizers via email pasreg2017@sic.shibaura-it.ac.jp. Please be sure to refer to your Program/Presentation ID in any correspondence.
